

Asset Management

End-to-End Asset Management Solutions

At SDM Consulting, we provide comprehensive asset management services designed to ensure accuracy, compliance and full lifecycle control of your physical assets. Our approach combines technical expertise, proven methodologies and advanced tools to deliver reliable asset information that supports sound financial reporting, audit readiness and strategic decision-making.

OUR ASSET MANAGEMENT SERVICES

End-to-End Asset Verification

We conduct detailed physical verification of assets to confirm existence, location and ownership. Our teams verify movable, immovable and infrastructure assets, ensuring your asset registers accurately reflect assets in use and align with financial records.

CONDITION ASSESSMENTS

Our condition assessments evaluate the operational state, remaining useful life and maintenance requirements of assets. This information supports better lifecycle planning, capital budgeting and informed asset replacement decisions.

Barcoding & Re-Barcoding

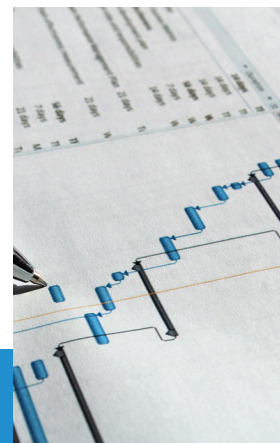

We implement barcode and re-barcode solutions to improve asset tracking and control. Each asset is uniquely identified and tagged, enabling easier monitoring, reduced asset loss and improved accountability across departments and locations.

Asset Reconciliation

We reconcile asset information across Fixed Asset Registers (FAR), General Ledger (GL) and Annual Financial Statements (AFS). This ensures consistency, accuracy and alignment between operational and financial asset data.

AFS Support & Audit Support

Our specialists provide hands-on support during financial year-end and audit processes. We assist with asset-related disclosures, audit queries, supporting schedules and remediation actions to improve audit outcomes and compliance.

ASSET MANAGEMENT

Fair Valuation

We perform fair value assessments in line with applicable accounting standards and regulatory requirements. Our valuation services support transparent financial reporting and accurate reflection of asset values.

Residual Value Reviews

We review and assess residual values to ensure they are realistic and compliant. This process improves depreciation accuracy and supports better long-term asset planning.

DRAFT JOURNALS & FAR UPDATES

We prepare draft journals for asset movements, corrections and adjustments, ensuring proper accounting treatment. Fixed Asset Registers are updated with verified data, valuation changes and reconciliation outcomes to maintain an accurate and compliant asset base.

Why Our Asset Management Approach Works

Our asset management services are designed to reduce risk, improve governance and provide organisations with reliable asset data they can trust. By combining physical verification, financial alignment and technical expertise, SDM Consulting delivers solutions that support compliance, transparency and sustainable operational performance.
