

# INVENTORY MANAGEMENT

## Accurate Inventory Control for Operational Efficiency

SDM Consulting provides comprehensive inventory management solutions that give organisations full visibility and control over their stock, consumables and movable items. Our services are designed to reduce losses, improve accountability and ensure accurate alignment between physical inventory and financial records.

## OUR INVENTORY MANAGEMENT SERVICES:

### Full Inventory Verification

We conduct detailed physical verification of all inventory items to confirm existence, quantities, condition and location. Our verification process ensures that inventory records accurately reflect items on hand, supporting improved stock control, financial accuracy and audit readiness.

### Consumables & Stock Control

Our consumables and stock control services focus on improving inventory tracking, usage monitoring and replenishment processes. We help organisations establish structured inventory systems that minimise wastage, prevent stock-outs and ensure efficient distribution across departments and sites.

## Reconciliation with Finance Systems

We reconcile inventory records with financial systems and the General Ledger to ensure consistency between operational stock data and financial reporting. This process supports accurate valuation, correct expense recognition and compliance with accounting and audit requirements.

## Our Approach

SDM Consulting combines hands-on verification, system alignment and best-practice inventory methodologies to deliver reliable, compliant and sustainable inventory management solutions. We work closely with client teams to ensure seamless implementation, skills transfer and long-term improvement.

## VALUE WE DELIVER

- Improved visibility and control over inventory and consumables
- Reduced losses, shrinkage and inefficiencies
- Accurate financial reporting and audit support
- Strengthened internal controls and accountability
- Better planning and decision-making
