

# SYSTEMS & TECHNOLOGY

## **Technology-Driven Solutions for Smarter Asset and Resource Management**

SDM Consulting delivers advanced systems and technology solutions that enhance visibility, accuracy and control across assets, infrastructure and operations. By combining proprietary platforms with emerging technologies, we enable organisations to make informed, data-driven decisions in real time.

## **OUR SYSTEMS & TECHNOLOGY SOLUTIONS**

### **Asset Management System (Proprietary SDM Software)**

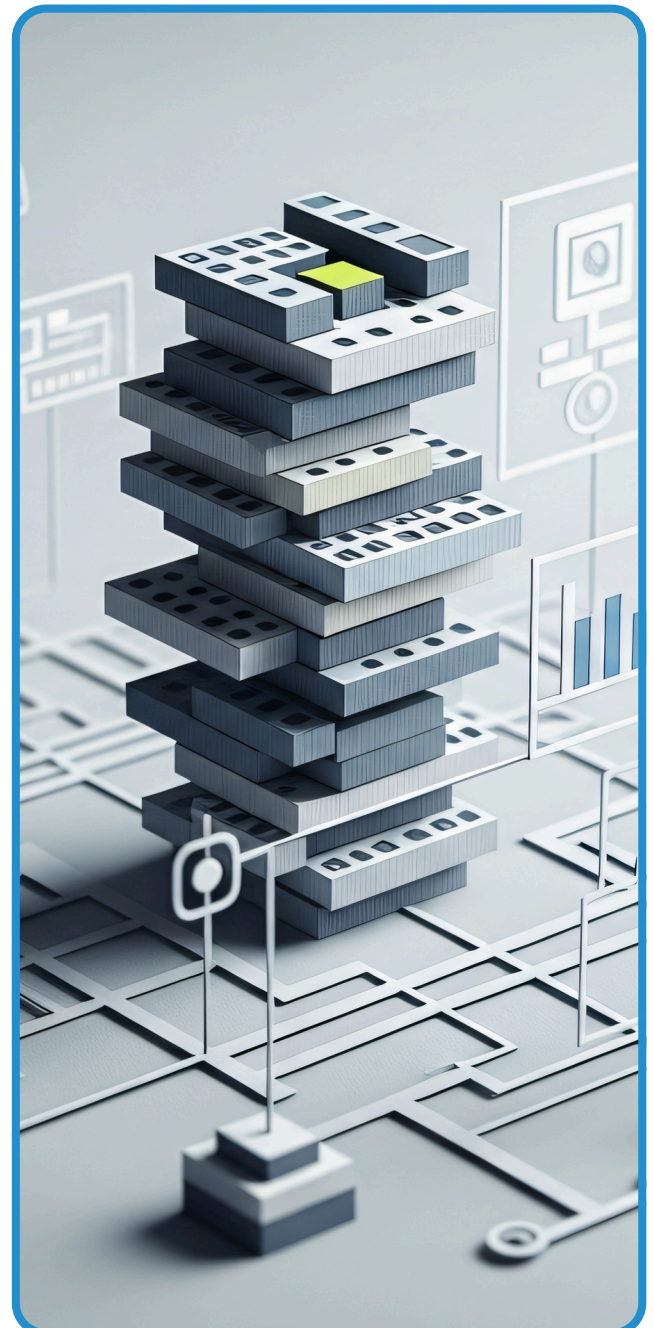

We developed our own web-based Asset Management System to support the full lifecycle management of movable, immovable, infrastructure and inventory assets. The system provides real-time dashboards, automated reporting and accurate asset tracking to support compliance, governance and strategic planning.

### **Municipal Assessment Dashboard Tool (MADT)**

Our Municipal Assessment Dashboard Tool provides municipalities with a comprehensive overview of asset performance, compliance and risk. The dashboard supports informed decision-making, prioritisation of interventions and improved oversight across municipal operations.

## **Housing Needs Register**

We implement structured Housing Needs Register systems that support accurate data collection, management and reporting. These solutions improve transparency, planning and compliance while enabling fair and efficient allocation processes.
